CLAY SHOOTING ANALYSIS

Shoot Log

Smartphone Operation Manual　Version 2.29.1

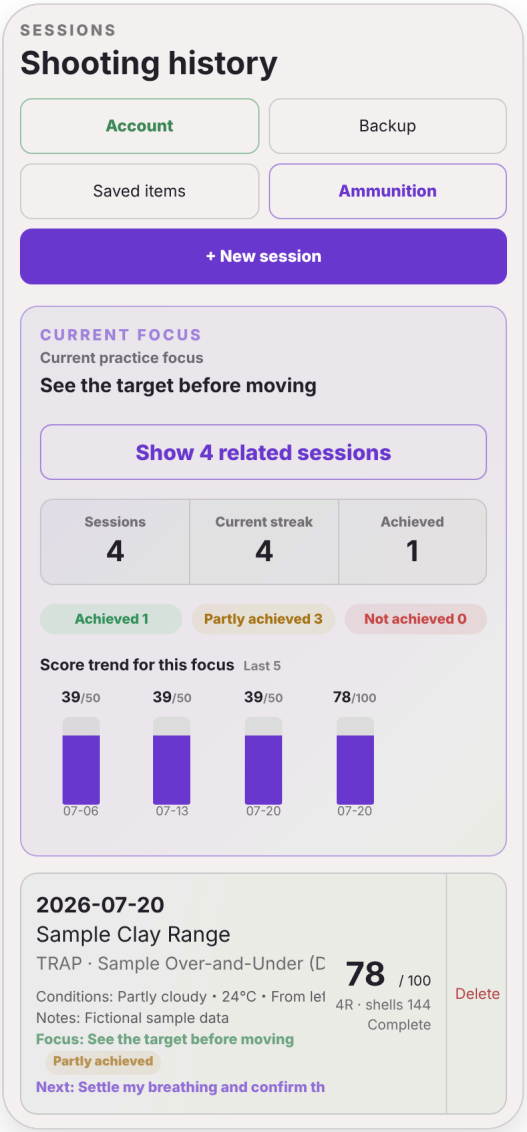

Actual app screens are shown at a readable size for each task. Long screens are automatically scrolled to the relevant section and captured separately.

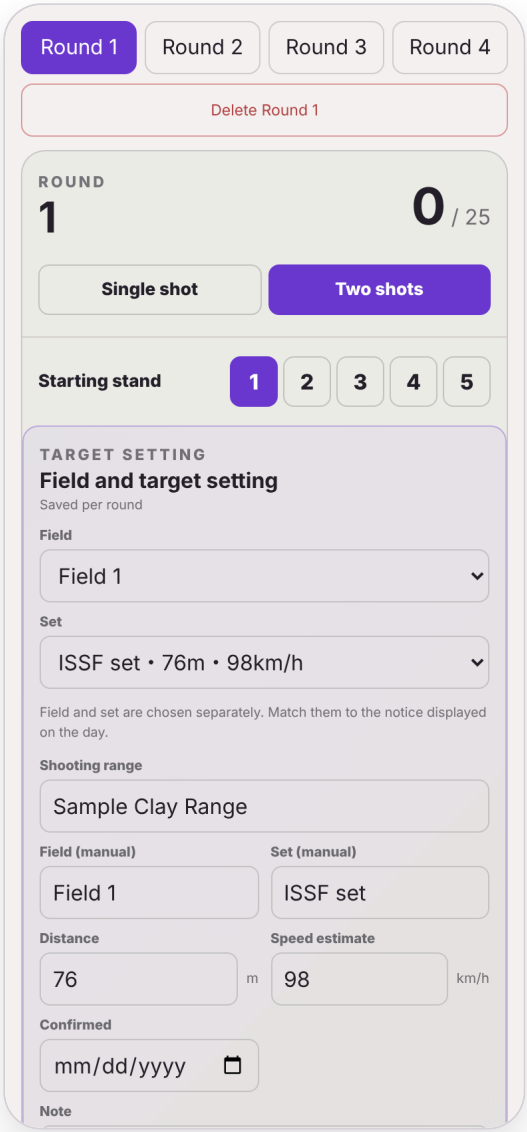

QUICK START

What to know first

- Every change is saved immediately on this device.
- While signed in, records sync to the cloud automatically.
- Save a JSON backup regularly as an independent copy.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

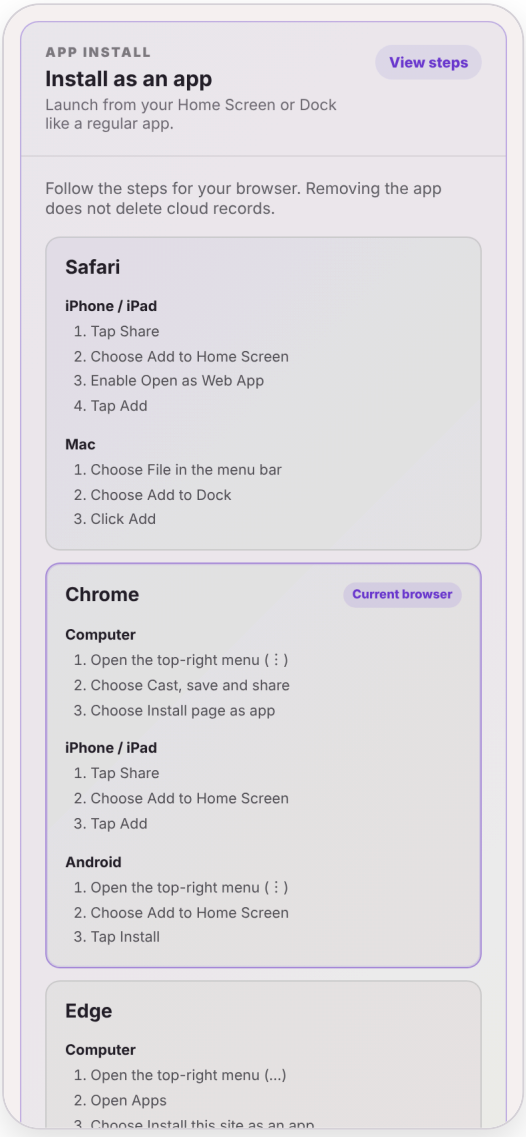

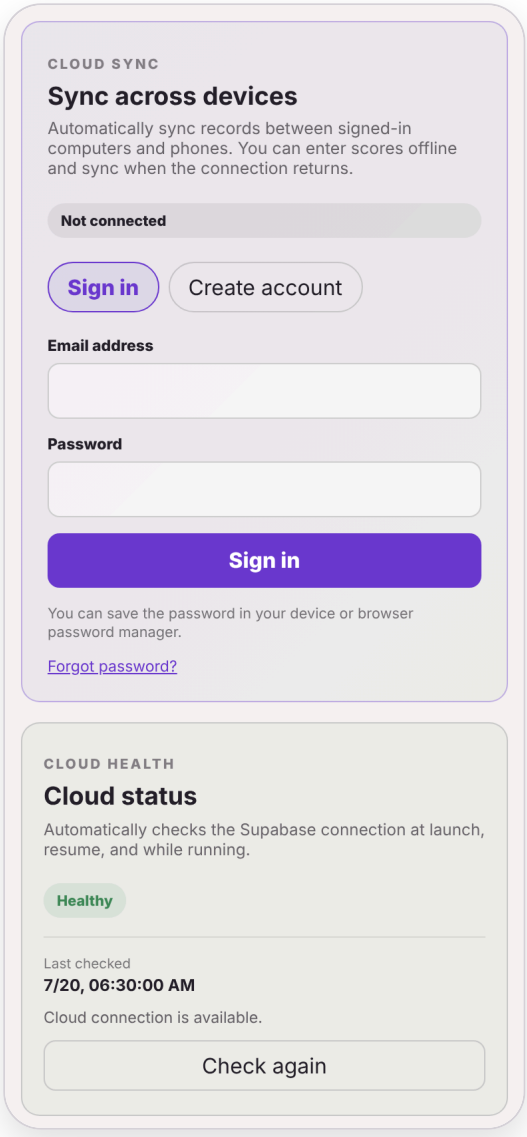

INSTALL / LOGIN

Install and sign in

- Add Shoot Log to the Home Screen or Dock from Safari, Chrome, or Edge.
- Sign in with your email address and password.
- Never share authentication or password-reset links.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

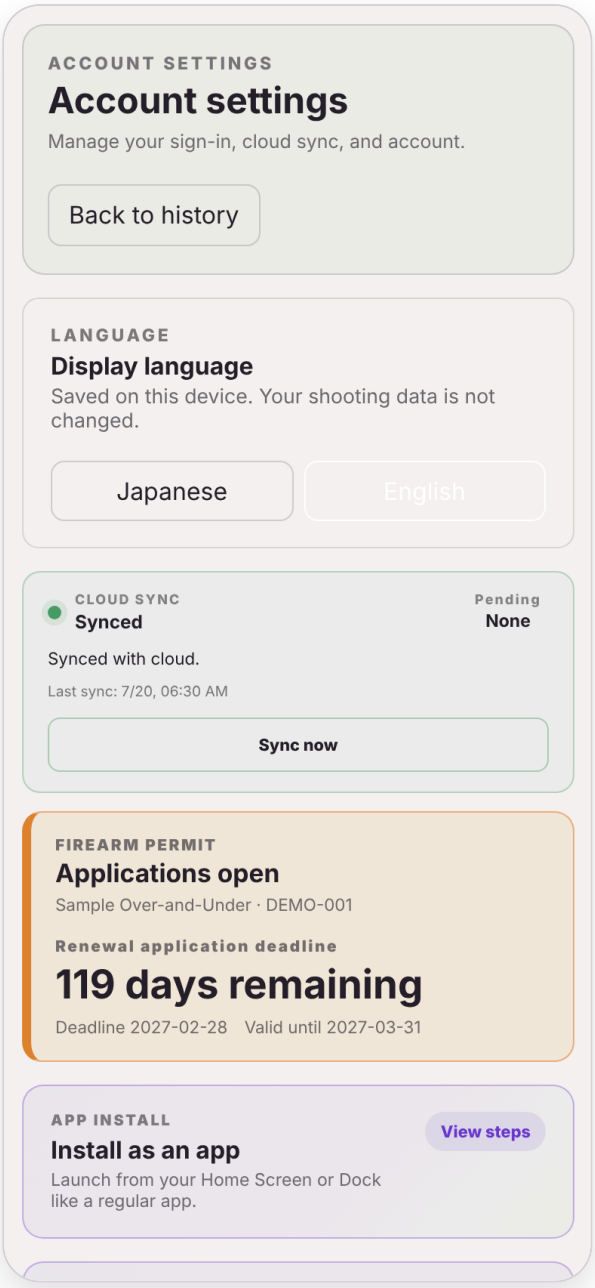

ACCOUNT / SYNC

Account settings and sync

- Display language, sync status, and firearm permits are managed from Account settings.
- Use Sync now to fetch changes made on another device.
- Normal changes sync automatically.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

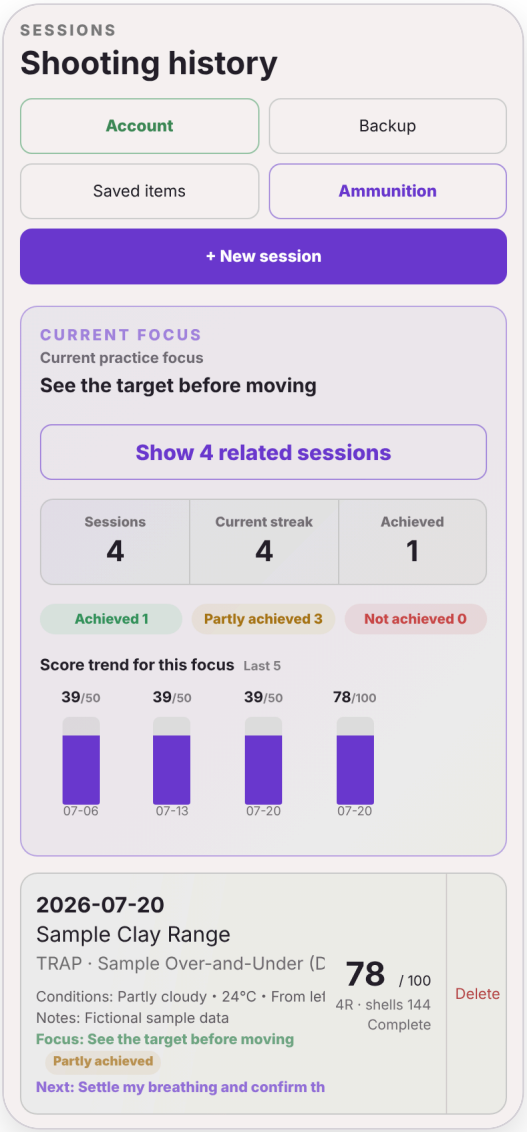

SESSIONS

History and practice focus

- Major actions appear directly below the Shooting history heading.
- Open a history card to continue entry or view analysis.
- Review the current focus and previous achievement results.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

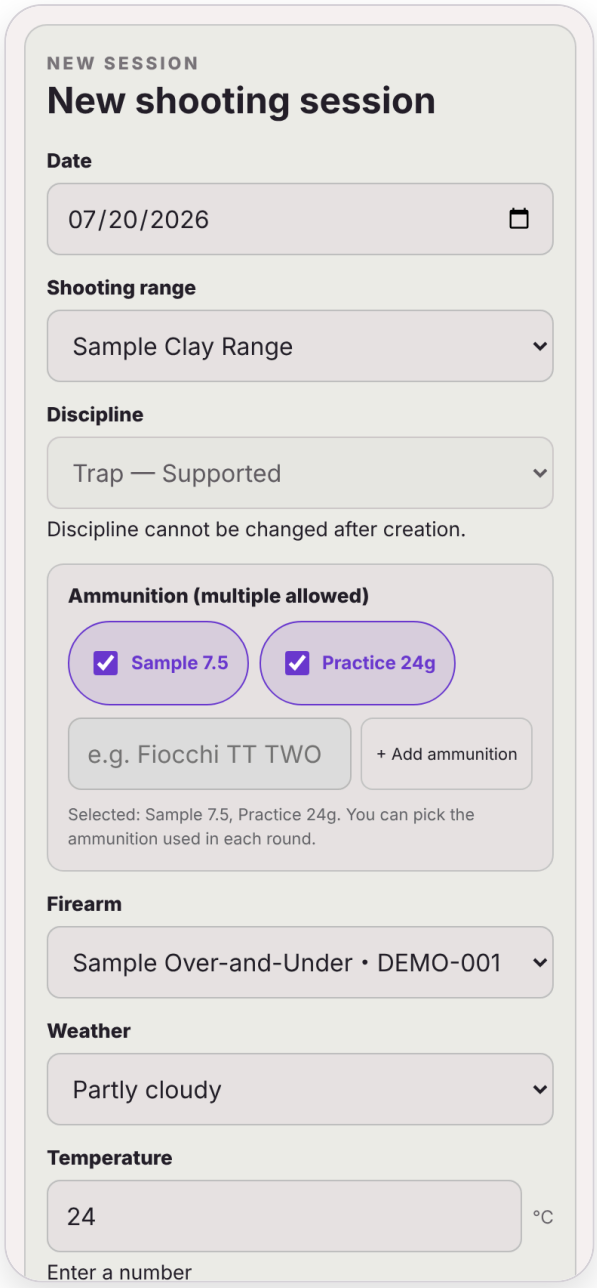

NEW SESSION

Create a session

- Select date, range, discipline, ammunition, and firearm.
- You can select more than one ammunition; each round can then use a different one.
- Weather, temperature, and wind are used for trend analysis.
- Choose one concrete practice focus for the day.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

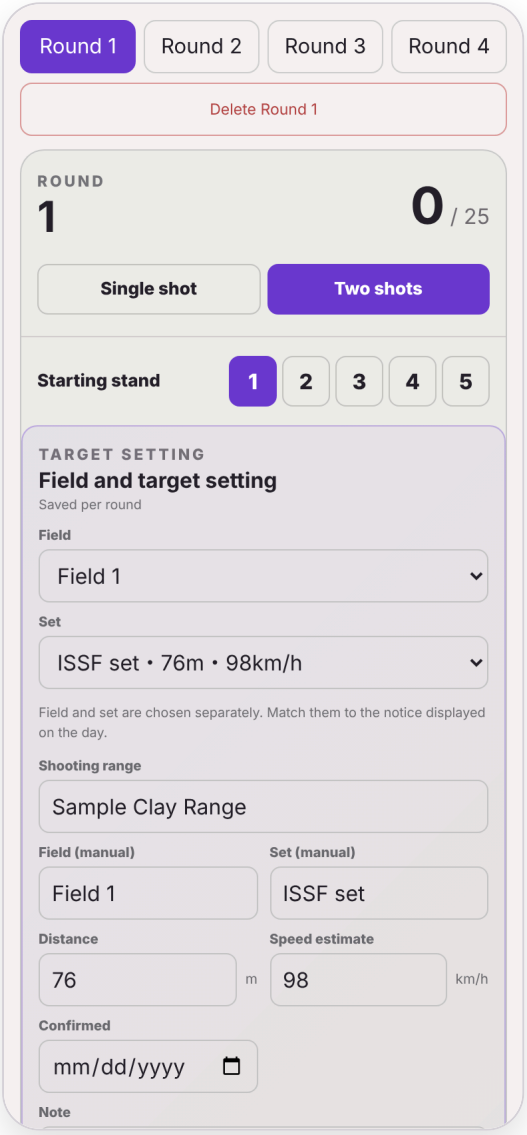

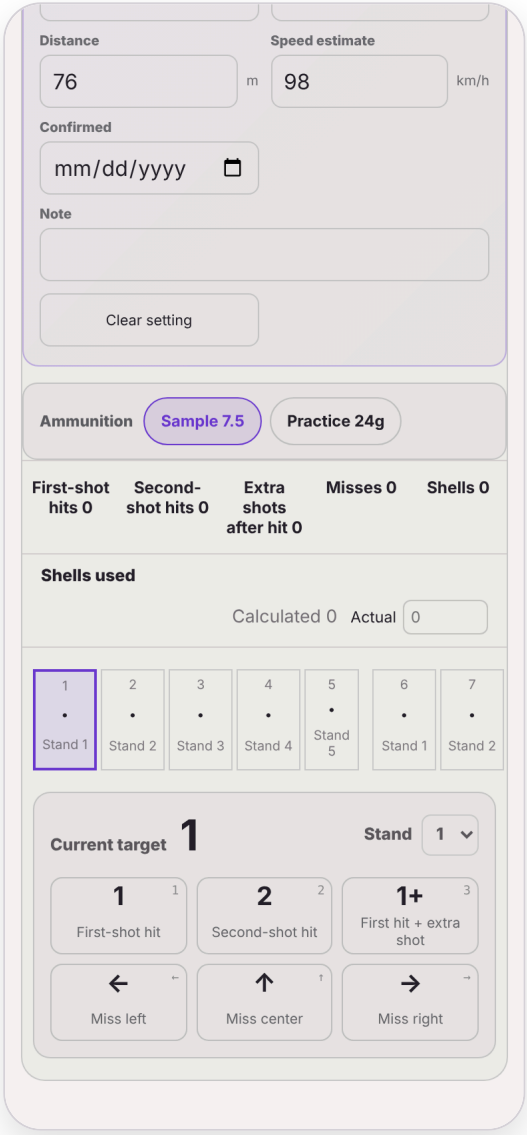

ROUND INPUT

Prepare a round

- Use the upper tabs to switch between Rounds 1 to 4.
- When a session uses several ammunition products, pick the one used in that round; usage is posted to the ledger per category.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

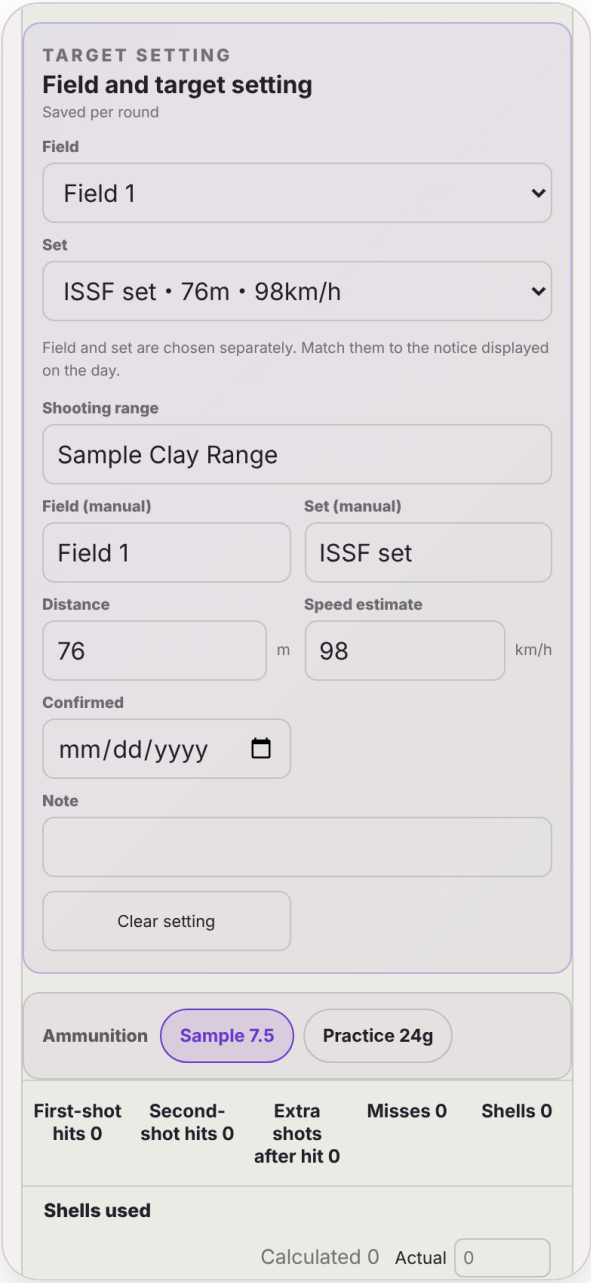

FIELD / SET

Record the field and set

- Field and set are selected separately, because the same field can run an ISSF set one day and a practice set the next.
- Choosing a set fills in the target distance and speed, which you can still adjust.
- Manage the options under Manage saved items: fields belong to a range, sets are shared across ranges.
- Stored values are estimates only. Always follow the notice displayed at the range that day.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

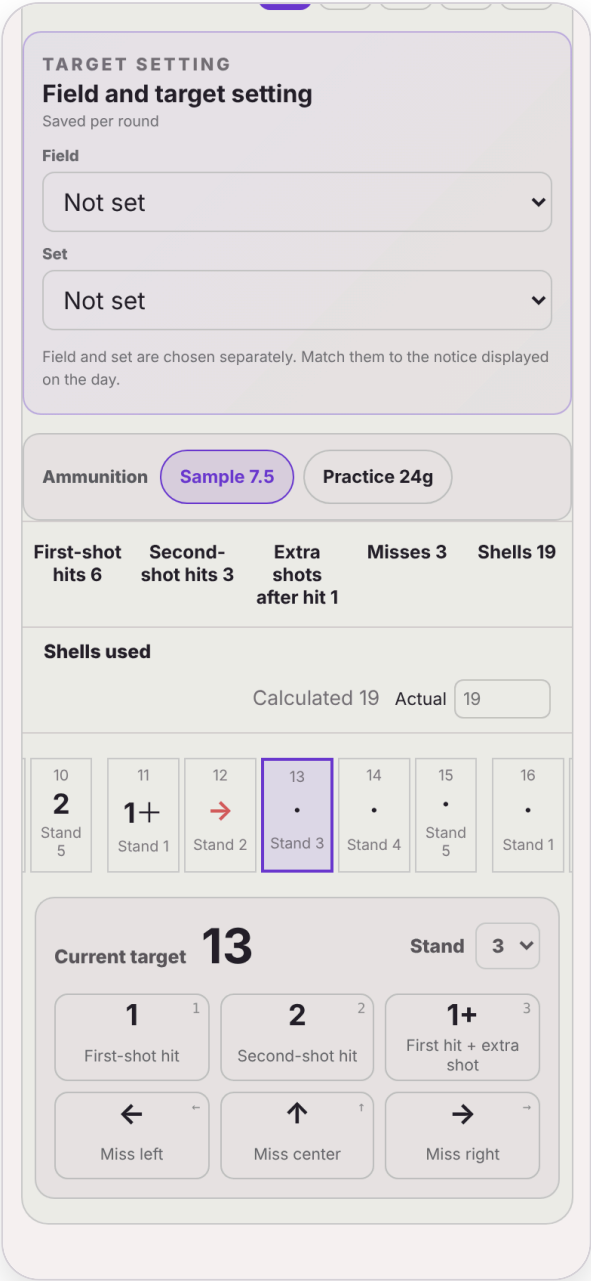

SCORING

Enter each target

- 1 records a first-shot hit and 2 records a second-shot hit.
- 1+ records a first-shot hit followed by an extra second shot: one point and two shells.
- Miss direction means the target's flight direction. Entry advances automatically.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

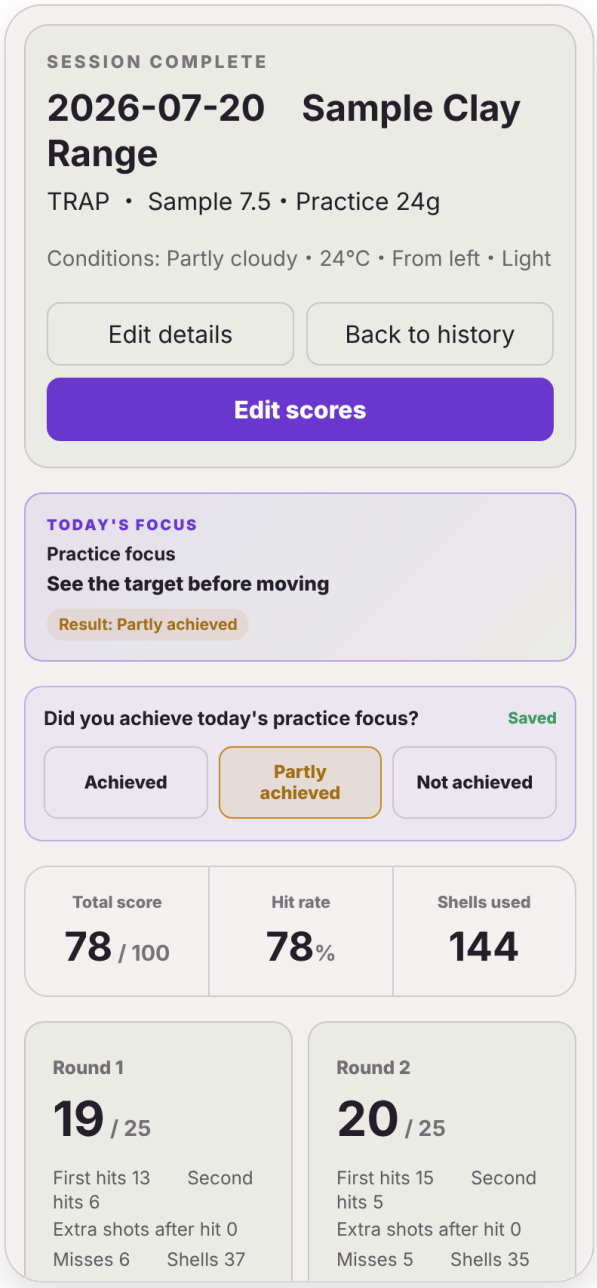

SESSION COMPLETE

Review the result

- Review totals, rounds, first- and second-shot hits, and miss directions.
- Use the figures for reflection without inferring causes that were not recorded.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

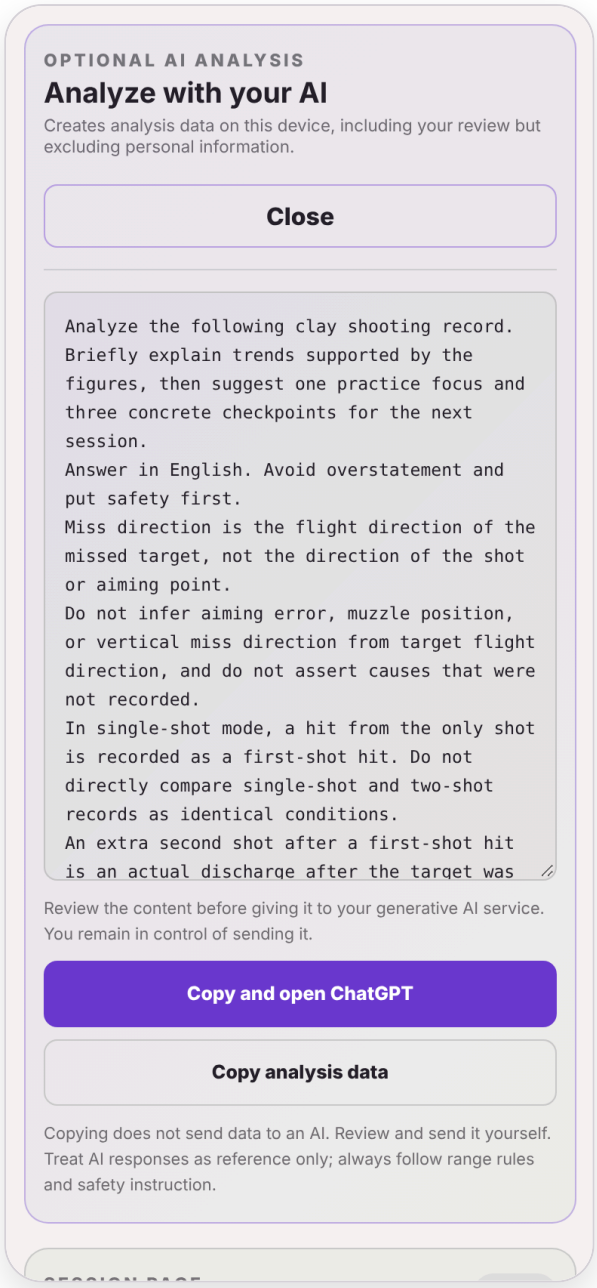

OPTIONAL AI ANALYSIS

Analyze with your own AI

- The export includes scores, conditions, and your written review.
- Dates, range names, firearm identifiers, and personal identity are excluded.
- Review the copied content and send it yourself.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

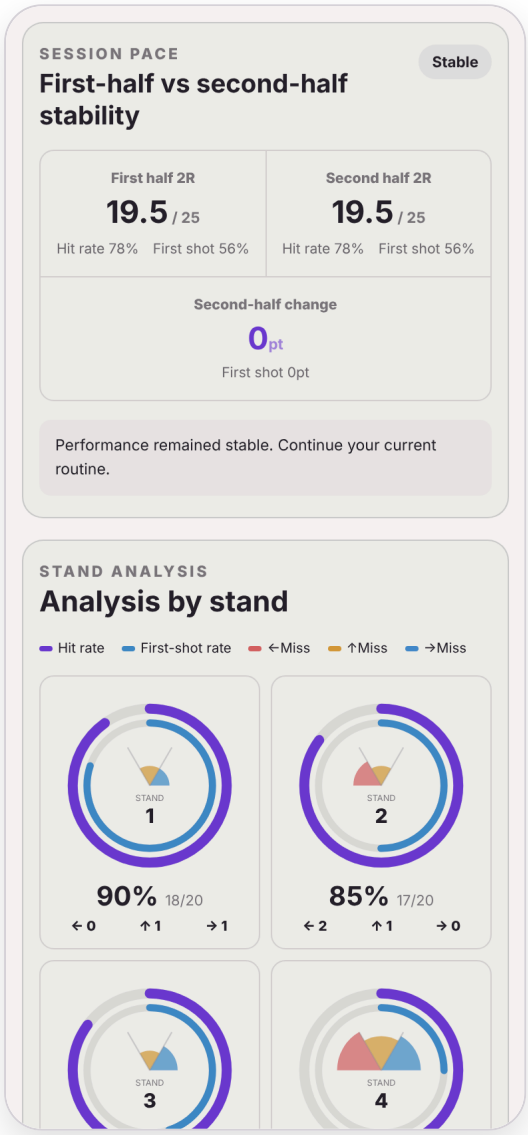

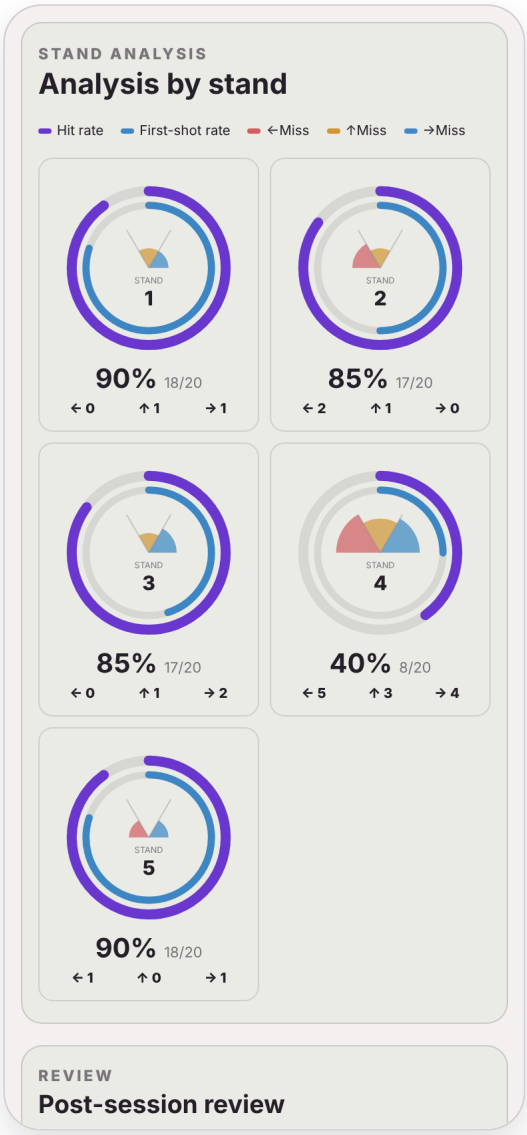

SESSION PACE

Pace and stand analysis

- Compare hit rates between the first and second halves.
- Compare hit rate and missed target-flight direction by stand.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

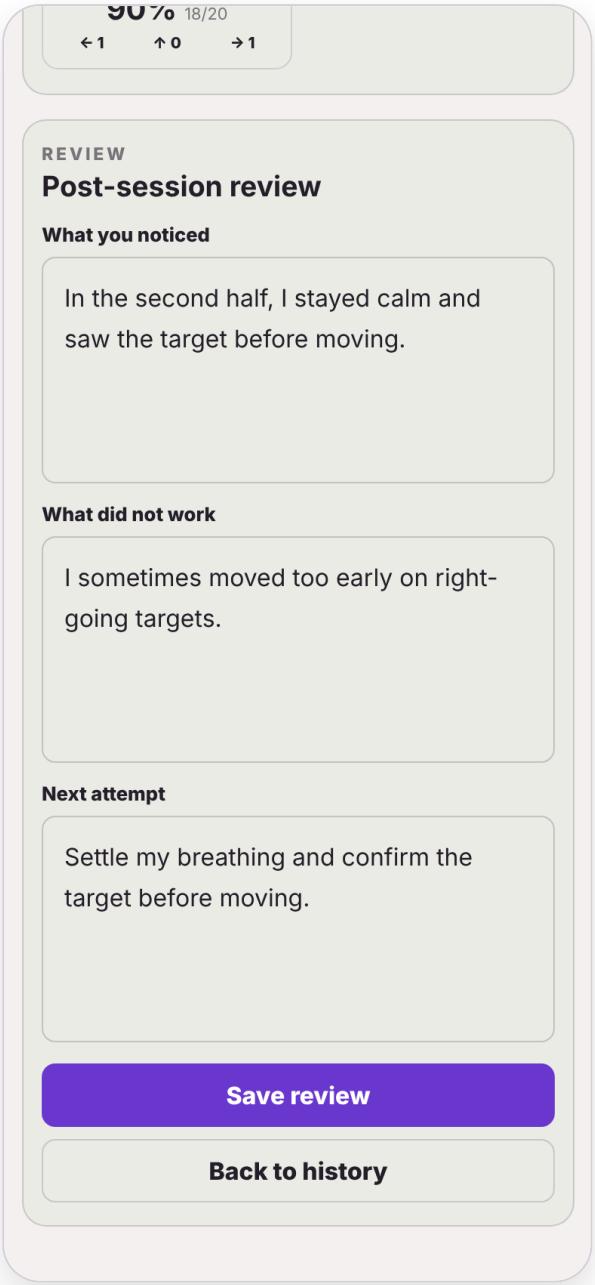

REVIEW

Post-session review

- Record what you noticed, what did not work, and what to try next.
- Keeping concerns in the record provides context when asking an AI for help.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

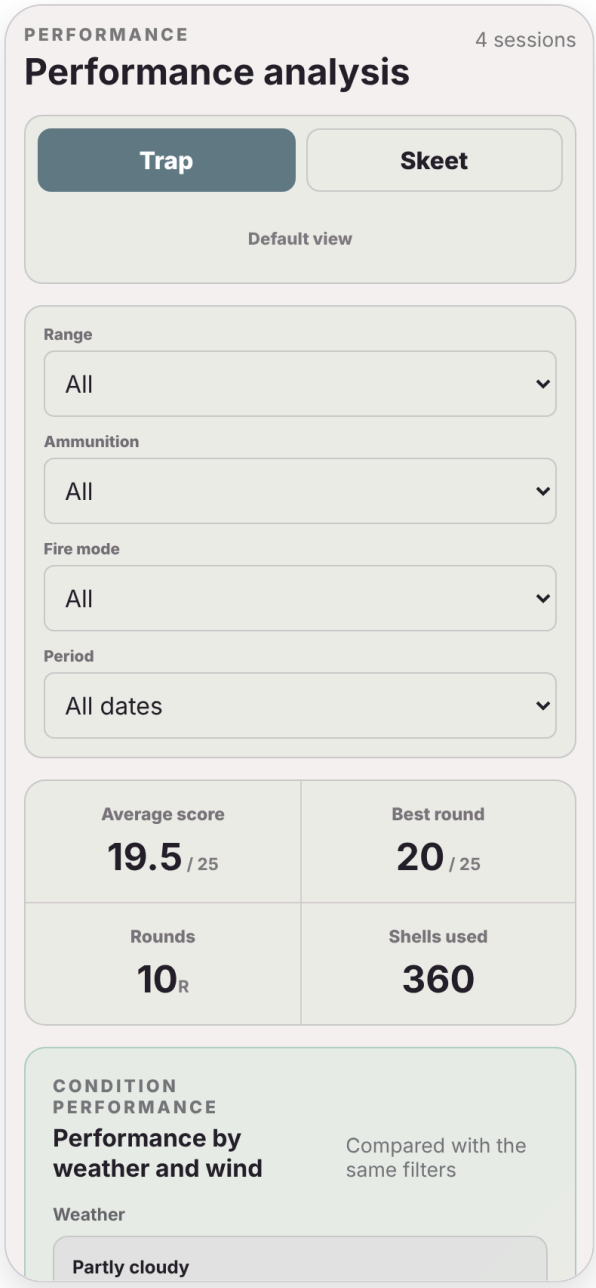

HISTORY ANALYSIS

Condition and ammunition trends

- Filter history by range, ammunition, fire mode, and period.
- Check both condition differences and sample size; treat small samples as indicative.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

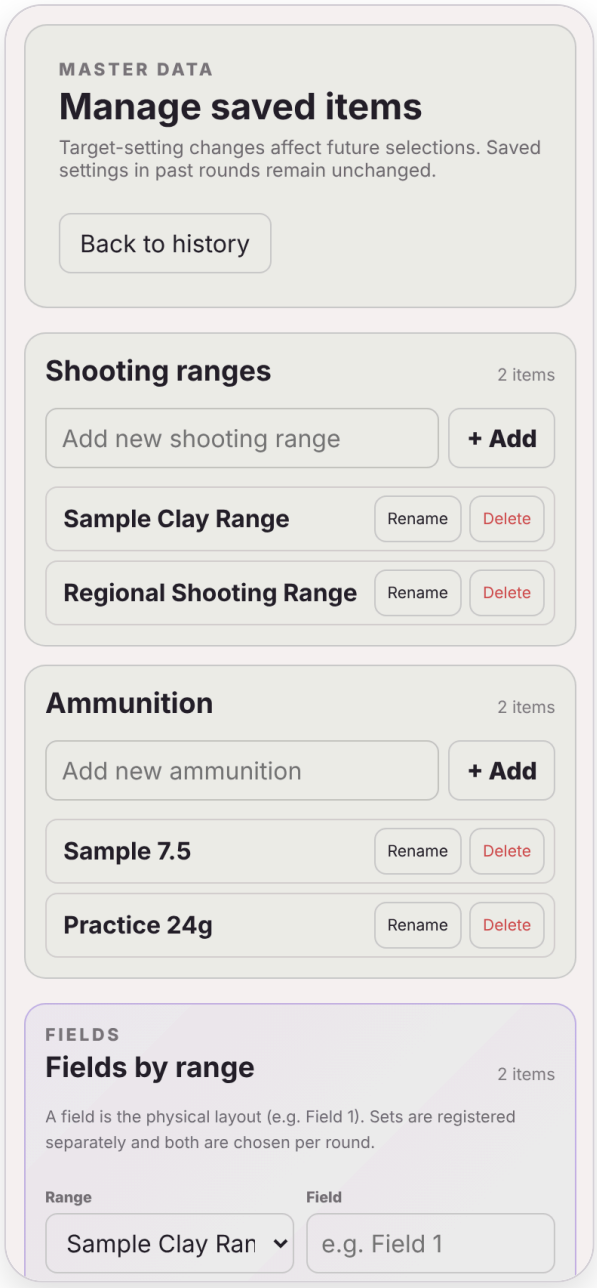

MASTER DATA

Manage saved items

- Add or rename shooting ranges and ammunition products.
- Renaming is reflected in past history.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

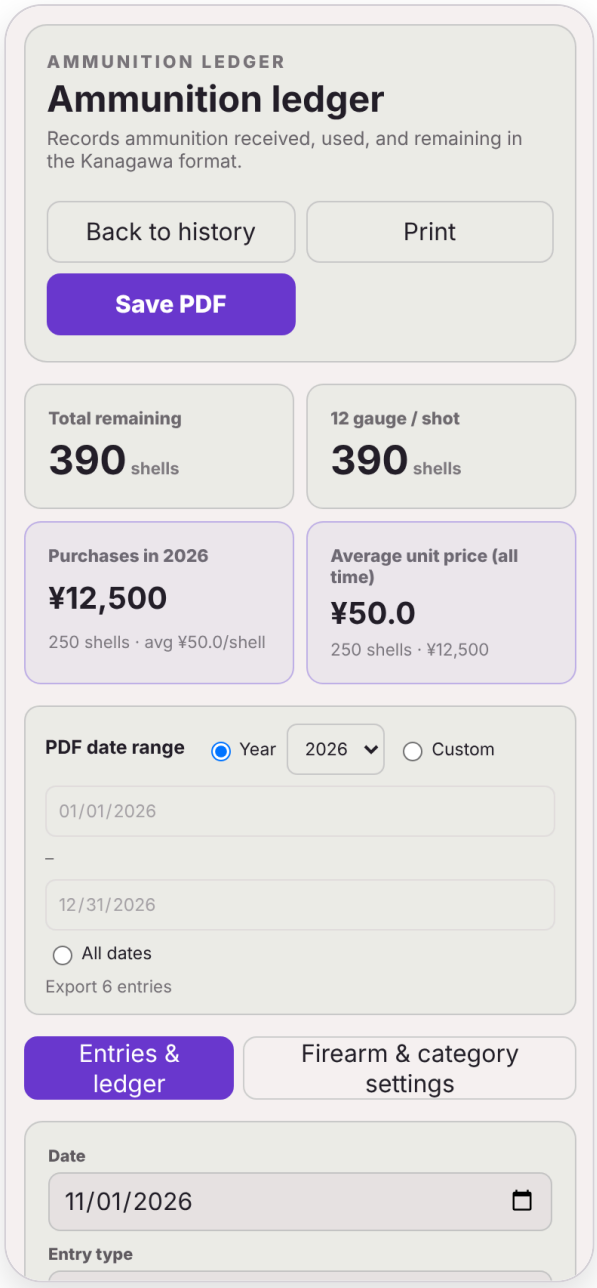

AMMUNITION LEDGER

Manage ammunition

- Record ammunition received, used, and remaining; completed sessions are added automatically.
- Usage is posted per ledger category, so several products in one category stay on a single line.
- Use Save PDF to export the ledger: it downloads on a computer, and opens the share sheet on an iPhone home-screen app.
- Confirm category, firearm, and date range before output.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

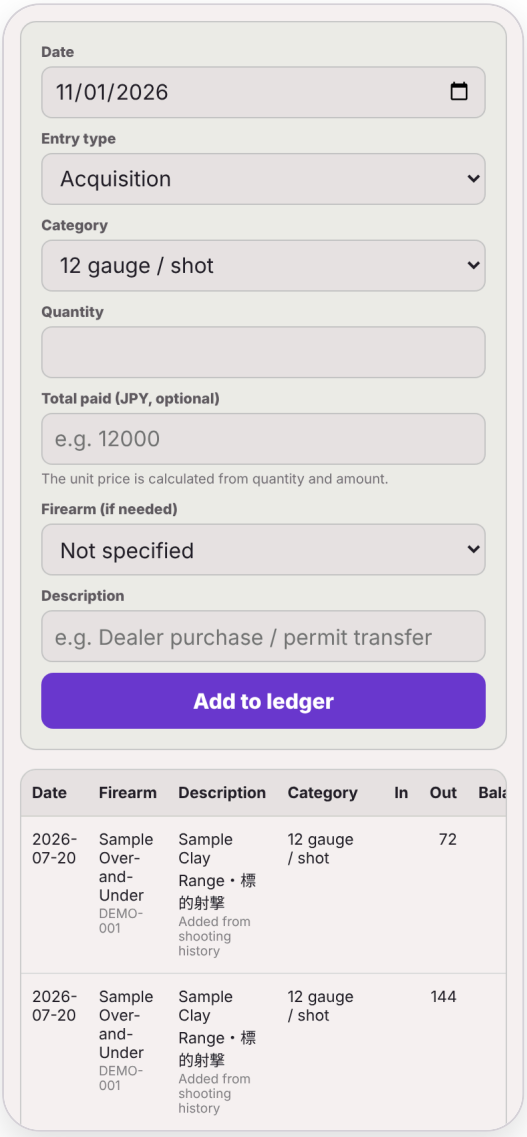

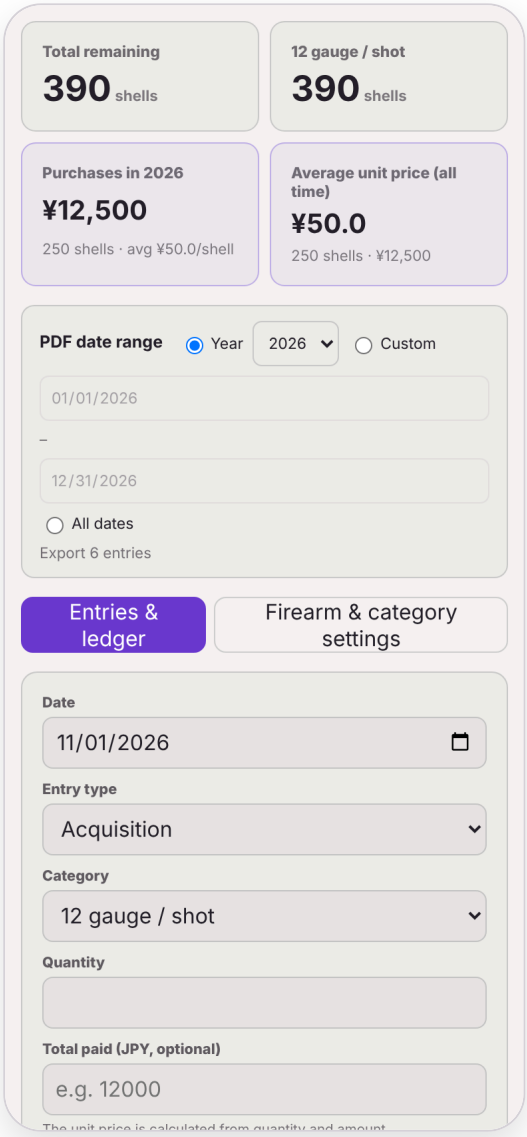

PURCHASE AMOUNT

Purchase amount and unit price

- Enter the total paid on an acquisition row and the price per shell is calculated from the quantity.
- Rows recorded earlier can be updated directly in the Amount column of the ledger table.
- The yearly purchase total and the all-time average unit price are shown at the top of the screen.
- Amounts are shown on screen only and are not printed on the Kanagawa ledger form.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

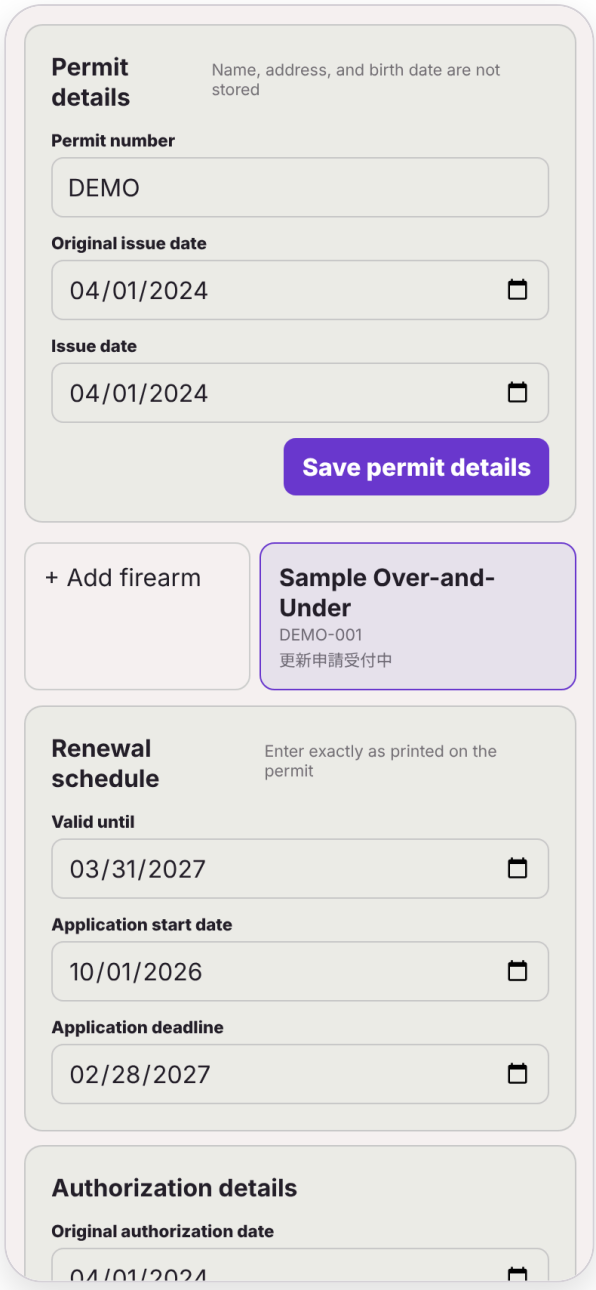

FIREARM PERMIT

Permit and renewal

- Always copy information from the original permit.
- Manage application start, deadline, and expiry for each firearm.
- Name, address, and date of birth are not stored.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

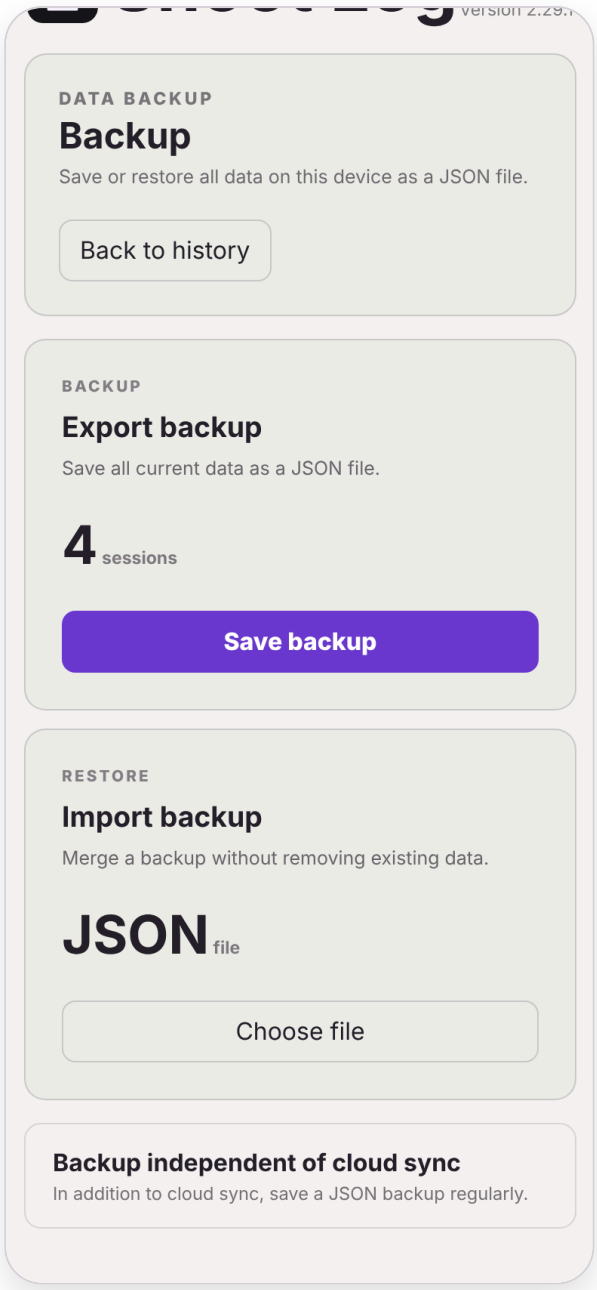

BACKUP

Backup and restore

- Export all device data to a JSON file.
- Restore merges with current data instead of deleting it.
- Save a fresh backup before major data operations.

Screens are actual React components displayed at smartphone width in manual capture mode. All data is fictional.

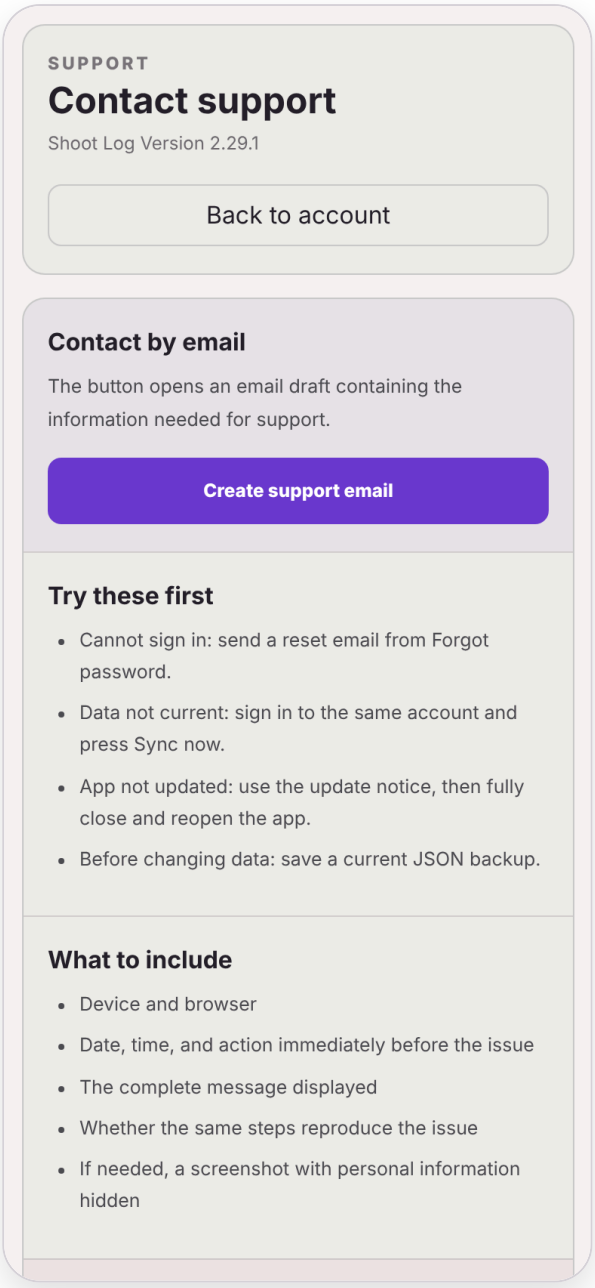

SUPPORT

If something goes wrong

- If data does not sync, check the connection and signed-in account.
- If the screen is outdated, use the update notice or safe recovery.
- Never include passwords or firearm permit numbers in support email.

VERSION HISTORY

Major versions

Version 2.29.1: On a Mac the ledger PDF now downloads instead of opening the share sheet, and the file is named with the export date.

Version 2.29.0: The ledger PDF is now built in the app and can be saved or shared from an iPhone home-screen app; usage is posted per ledger category.

Version 2.28.0: Field and target set are now chosen separately, and selecting a set fills in distance and speed.

Version 2.27.0: Added purchase amounts with automatic unit-price calculation, plus multi-ammunition sessions with per-round selection.

Version 2.26.1: Integrated target-setting add, edit, and delete controls under the range master while preserving past-round snapshots.

Version 2.25.1: Added per-round field and target settings, Isehara and Ooi presets, manual entry, and setting-based analysis.

Version 2.24.0: Added private administrator analytics without individual shooting records.

Version 2.23.0: Added distinct Trap and Skeet history, discipline-specific
